

PROJECT: SQL QUERY LINTER & STYLE FIXER

AI USAGE IN THE PROJECT

What AI Helped With

- Generating SQL correction suggestions.
- Detecting coding standard violations in SQL queries.
- Refactoring SQL queries while preserving functionality.
- Improving query readability and formatting.
- Generating project reports and documentation.
- Assisting in the development of the Admin Portal and security monitoring features.

What AI Got Wrong

- Occasionally changed SQL business logic while suggesting fixes.
- Suggested incorrect aliases or naming conventions.
- Generated inconsistent fixes for complex SQL queries.
- Did not fully understand project-specific coding standards.
- Sometimes produced unnecessary code modifications that required manual review.

Best Prompts Used

Prompt 1: SQL Violation Detection

"Identify all SQL coding standard violations in the given query and explain each issue."

Prompt 2: SQL Refactoring

"Refactor the SQL query while preserving its functionality and improving readability."

Prompt 3: Replace SELECT *

"Replace SELECT * with explicit column names without changing query behavior."

Prompt 4: Naming Convention Fix

"Convert all SQL object names to snake_case following coding standards."

Prompt 5: Alias Suggestion

"Suggest meaningful aliases for tables and joins while maintaining readability."

Prompt 6: Formatting Fix

"Apply standard SQL indentation, keyword casing, and formatting rules."
